

Readme- ShipThrd.cpp

OBJECTIVES:

Creates a subclass of Qthread which directly acts as a thread.

QT FEATURES USED:

Qthread – for implementing new thread.

QObject – included for making use of slots and signals.

VARIABLES AND MEMBER FUNCTIONS:

flag – signal which is periodically emitted while the thread runs.

finished – signal which is emitted when thread finishes execution.

run() - starts when class object is created and emits flag every 100ms.
